ABOUT ME

Forward-thinking AI & Machine Learning undergraduate focused on architecting end-to-end AI applications. Leveraging expertise in GenAI, RAG systems, and predictive forecasting to tackle complex challenges including building an edge-AI monitoring pipeline for ISRO. Passionate about using Python and FastAPI to design scalable, high performance data solutions.

SKILLS

- **Languages:** Python, SQL, Java
- **AI / ML:** NLP, Text-to-SQL Systems, LLM Applications, Anomaly Detection, Prompt Engineering
- **Frameworks:** FastAPI, Streamlit, React, Scikit-learn, TensorFlow
- **Databases & MLOps:** PostgreSQL, SQLite, Docker
- **Tools:** GitHub, VS Code
- **Soft Skills:** Analytical and Critical Thinking, Research & Documentation, Teamwork, Leadership

PROJECT EXPERIENCE

AI-Powered Air Quality Monitoring System (ISRO Project)

Nov 2025 – Present

- Contributing as a System Engineer and Data Analyst Intern on a team-based edge-computing air quality monitoring system developed for the Indian Space Research Organisation (ISRO).
- Developing a hybrid LSTM pipeline using physics-validated outputs for real-time AQI forecasting and compliance monitoring.
- Supporting PINN to Chemical Transport Model (CTM) migration via operator splitting to enhance atmospheric simulation accuracy.
- Integrating ESP32-S3 edge devices via I2C/UART bridges for reliable, non-blocking sensor data ingestion.

PaperPilot AI: Local RAG Chatbot & Research Assistant

2026

- Built a 100% local, zero-cost AI research assistant using FastAPI, React, and Hugging Face models.
- Engineered a RAG chatbot via FAISS and all-MiniLM-L6-v2 embeddings, achieving <1s query retrieval on dense PDFs.
- Developed a multi-stage NLP pipeline using BART to extract methodologies, summarize gaps, and compute 3 distinct readability metrics.
- Designed a custom vector-storage comparison engine enabling simultaneous semantic analysis of up to 5 research papers.

Argus: Real-Time Fraud Detection MLOps System

2026

- Built an anomaly detection system to identify suspicious financial transactions and fraud patterns.
- Developed an XGBoost classifier, engineering 46 transactional and behavioral features managed via Feast.
- Achieved <100 ms inference latency by integrating a Redis-backed FastAPI feature serving layer.
- Automated model retraining and experiment tracking with Airflow and MLflow to address concept drift.

AI Chatbot

2024

- Developed an interactive AI chatbot using Python, TensorFlow, Keras, and NLTK to facilitate automated conversational responses.
- Built an intent classification model using NLP and an intents.json dataset.
- Implemented NLP tasks, including tokenization, stemming for user queries.

CERTIFICATIONS

Computer Graphics — NPTEL

GenAI Powered Data Analytics Job Simulation — TATA iQ, Forage

EDUCATION

Cambridge Institute of Technology

2023 – Present

Bachelor of Engineering (Artificial Intelligence & Machine Learning)

CGPA: 7.97
